

Pocket Park

ABOUT THE POCKET PARK

The park addresses the lack of public space in the developed urban areas of large cities. It creates public space that is open to anyone and accessible for all users.

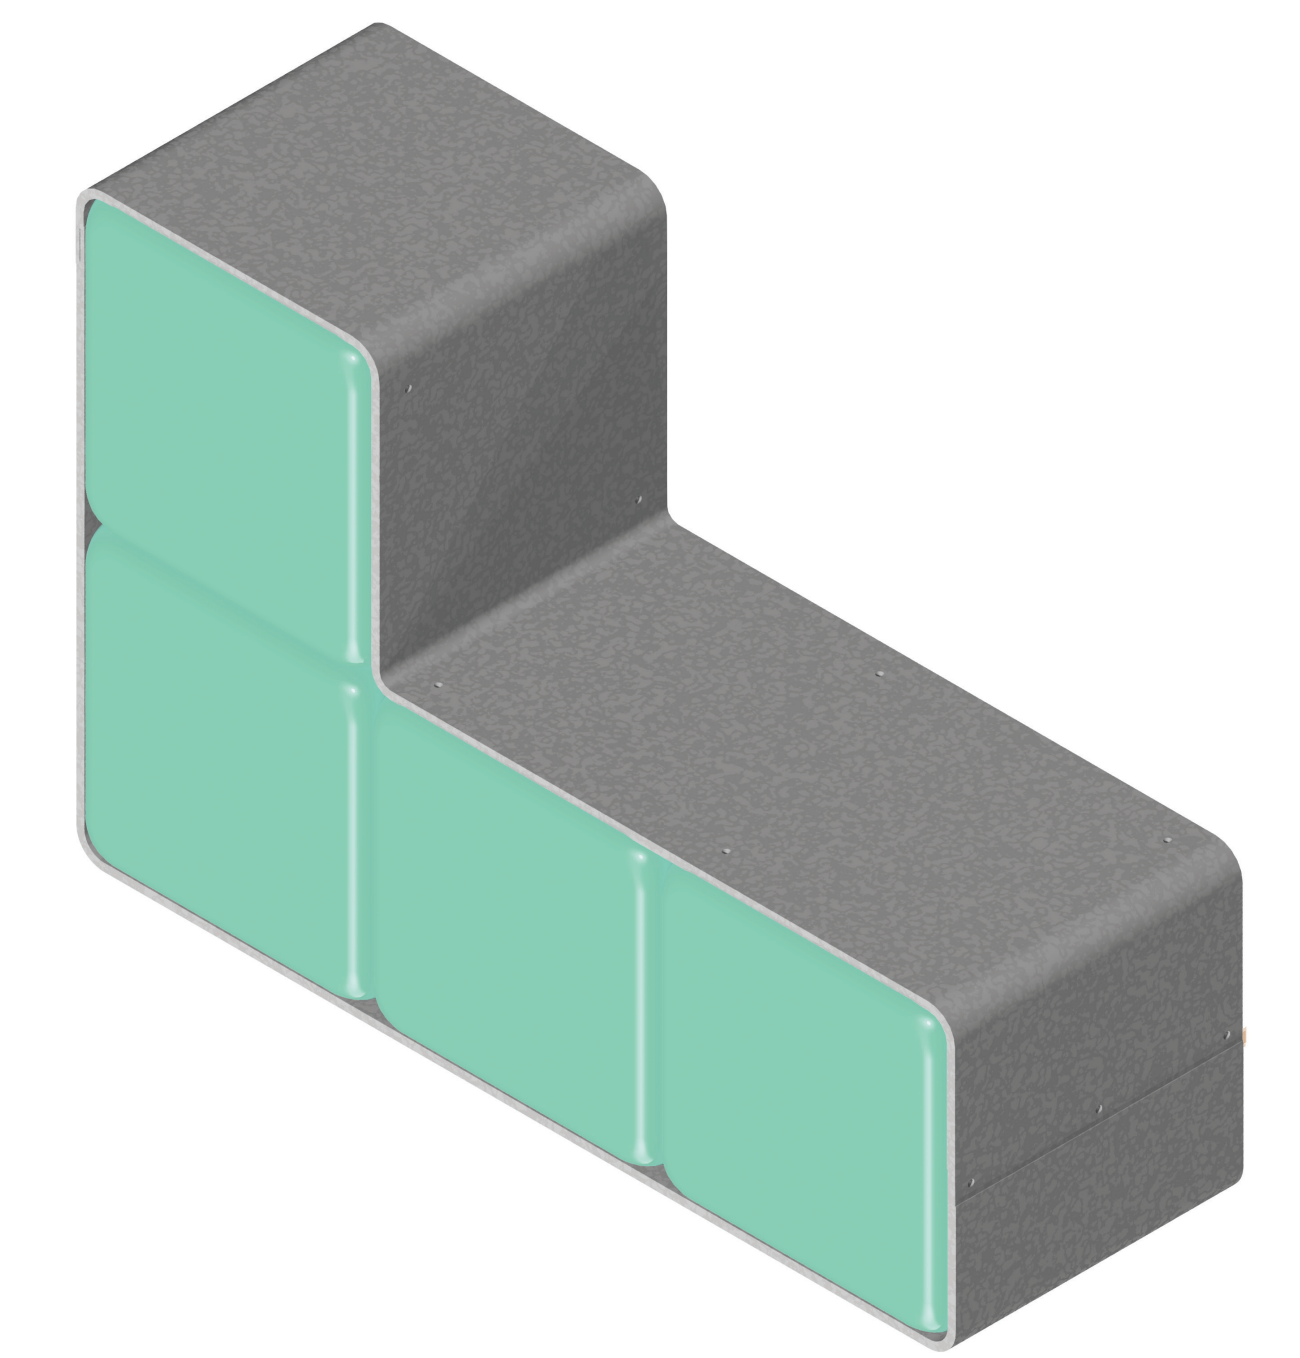

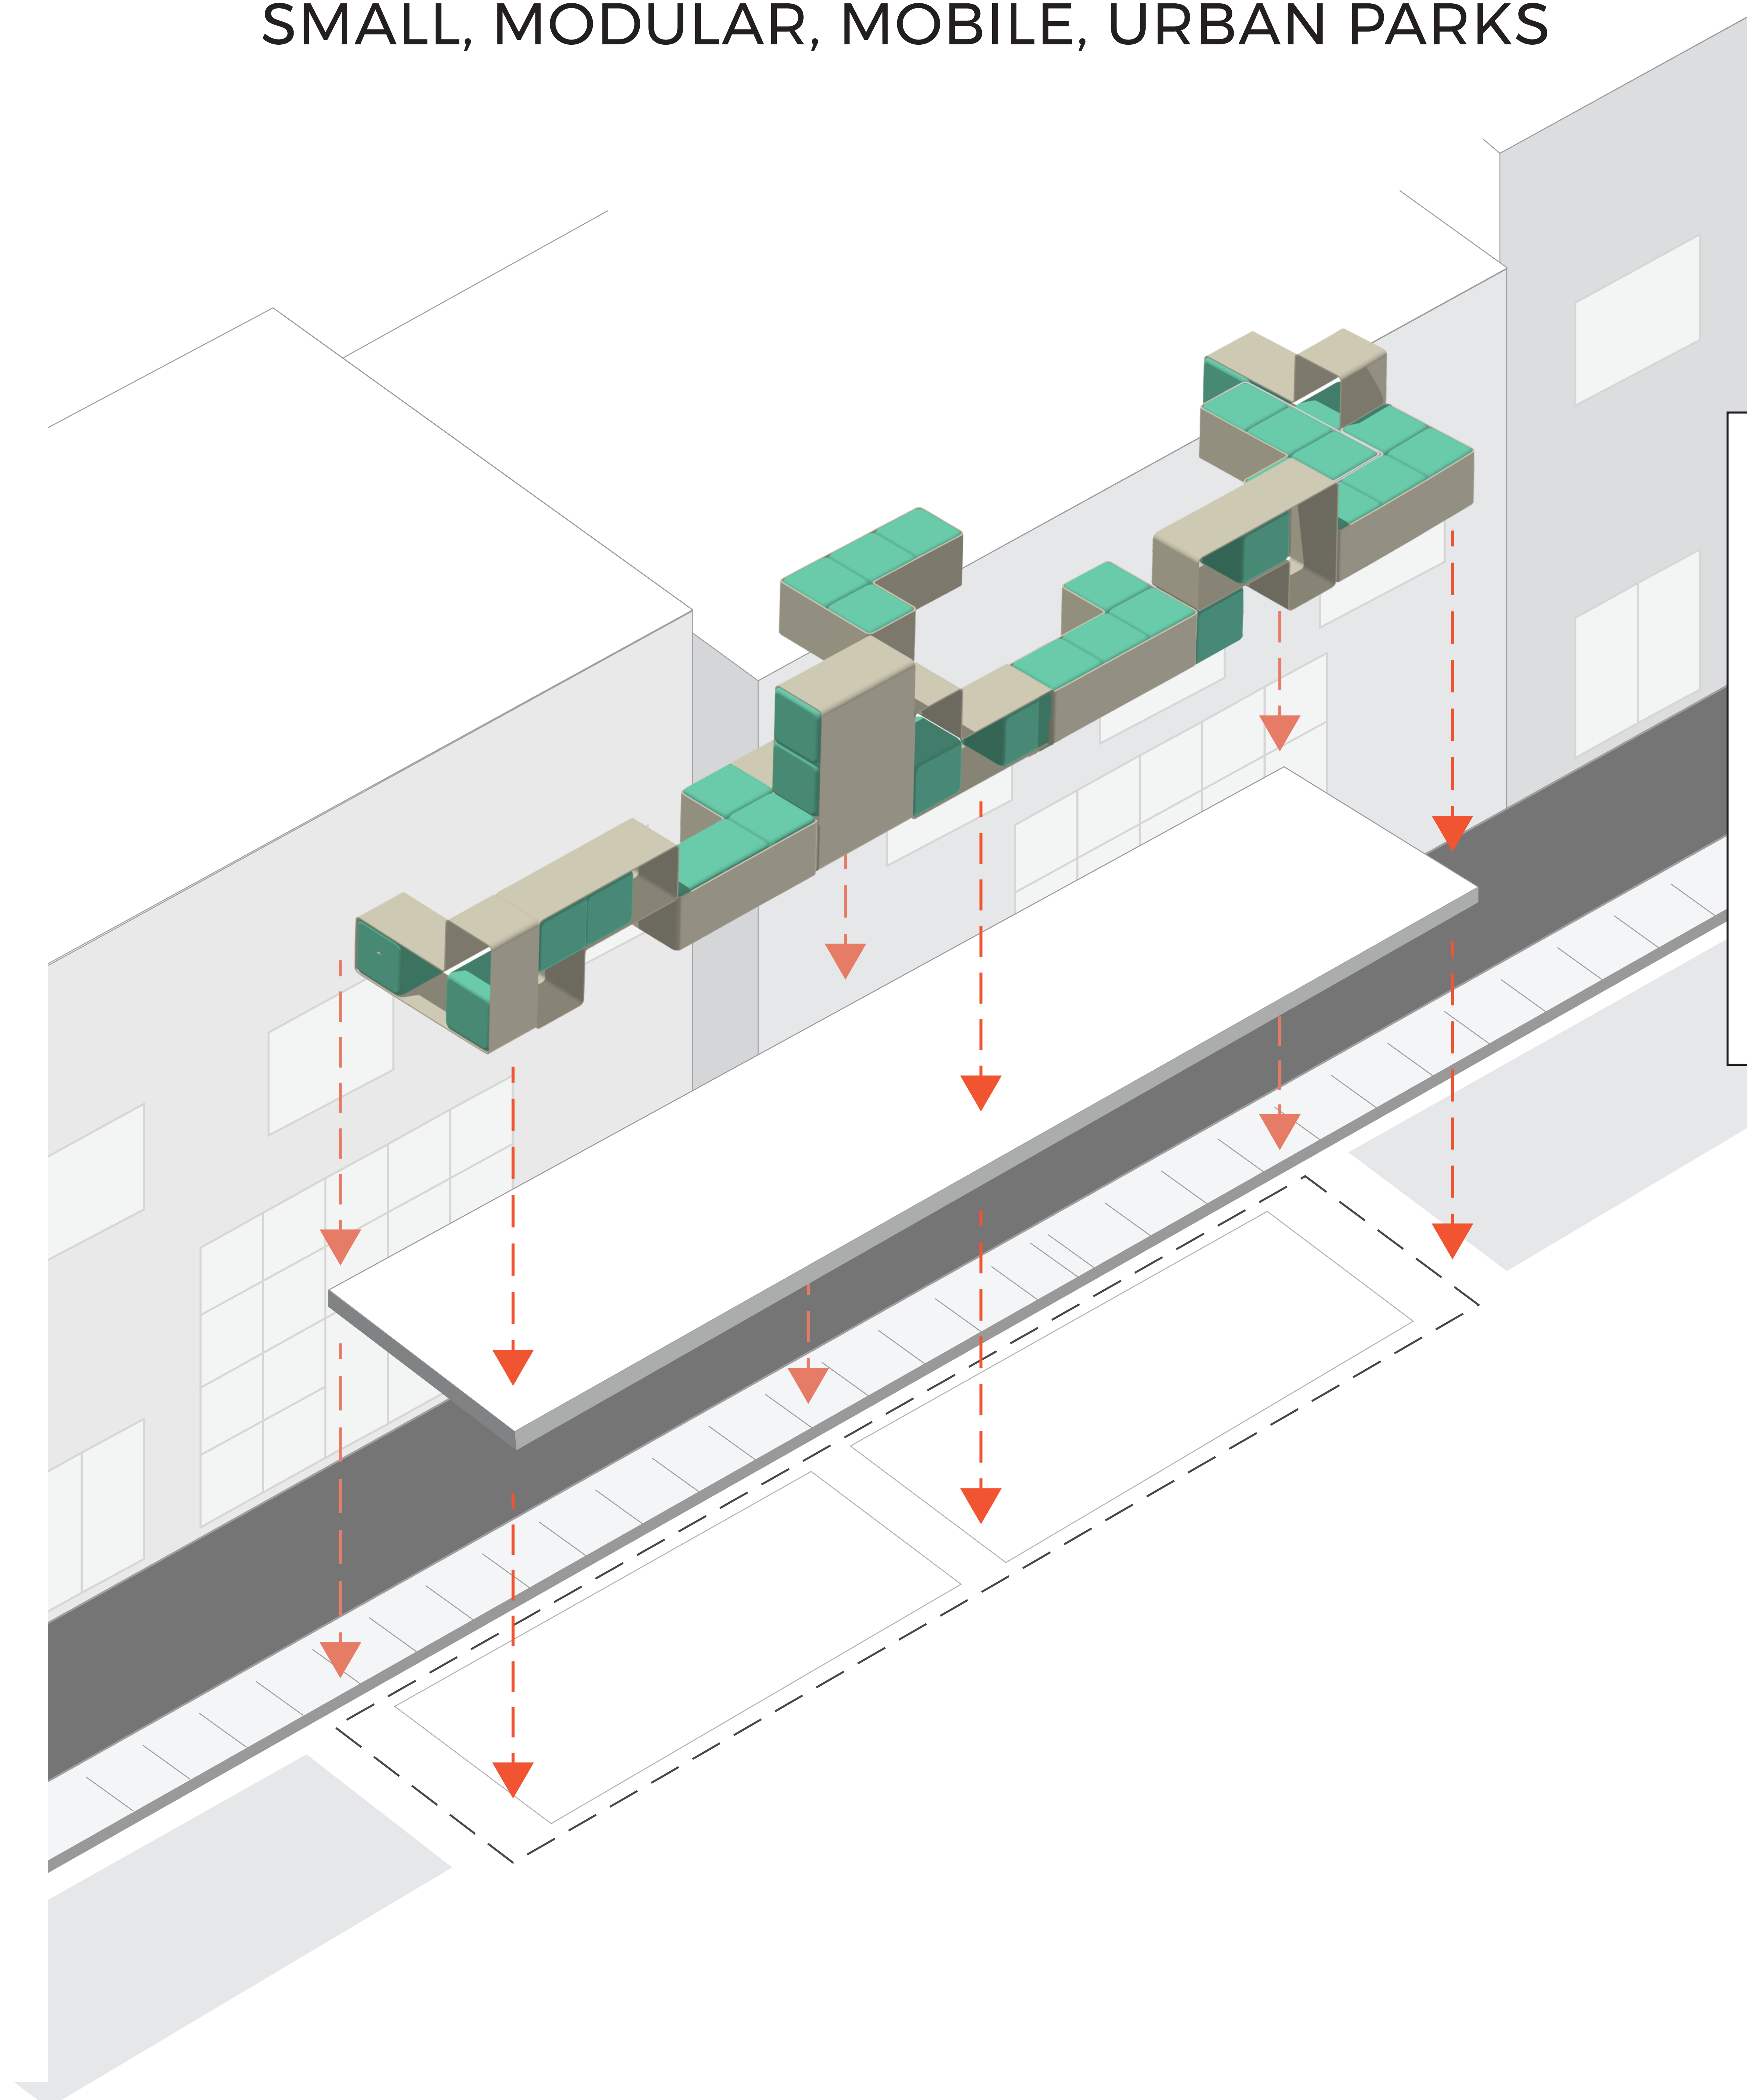

HOW IT WORKS

The park is mobile on the back of a single truck and can be assembled rapidly from a minimum number of components. The modular construction allows the park to be assembled in a variety of locations and configurations allowing it to be made suitable for a variety of environments.

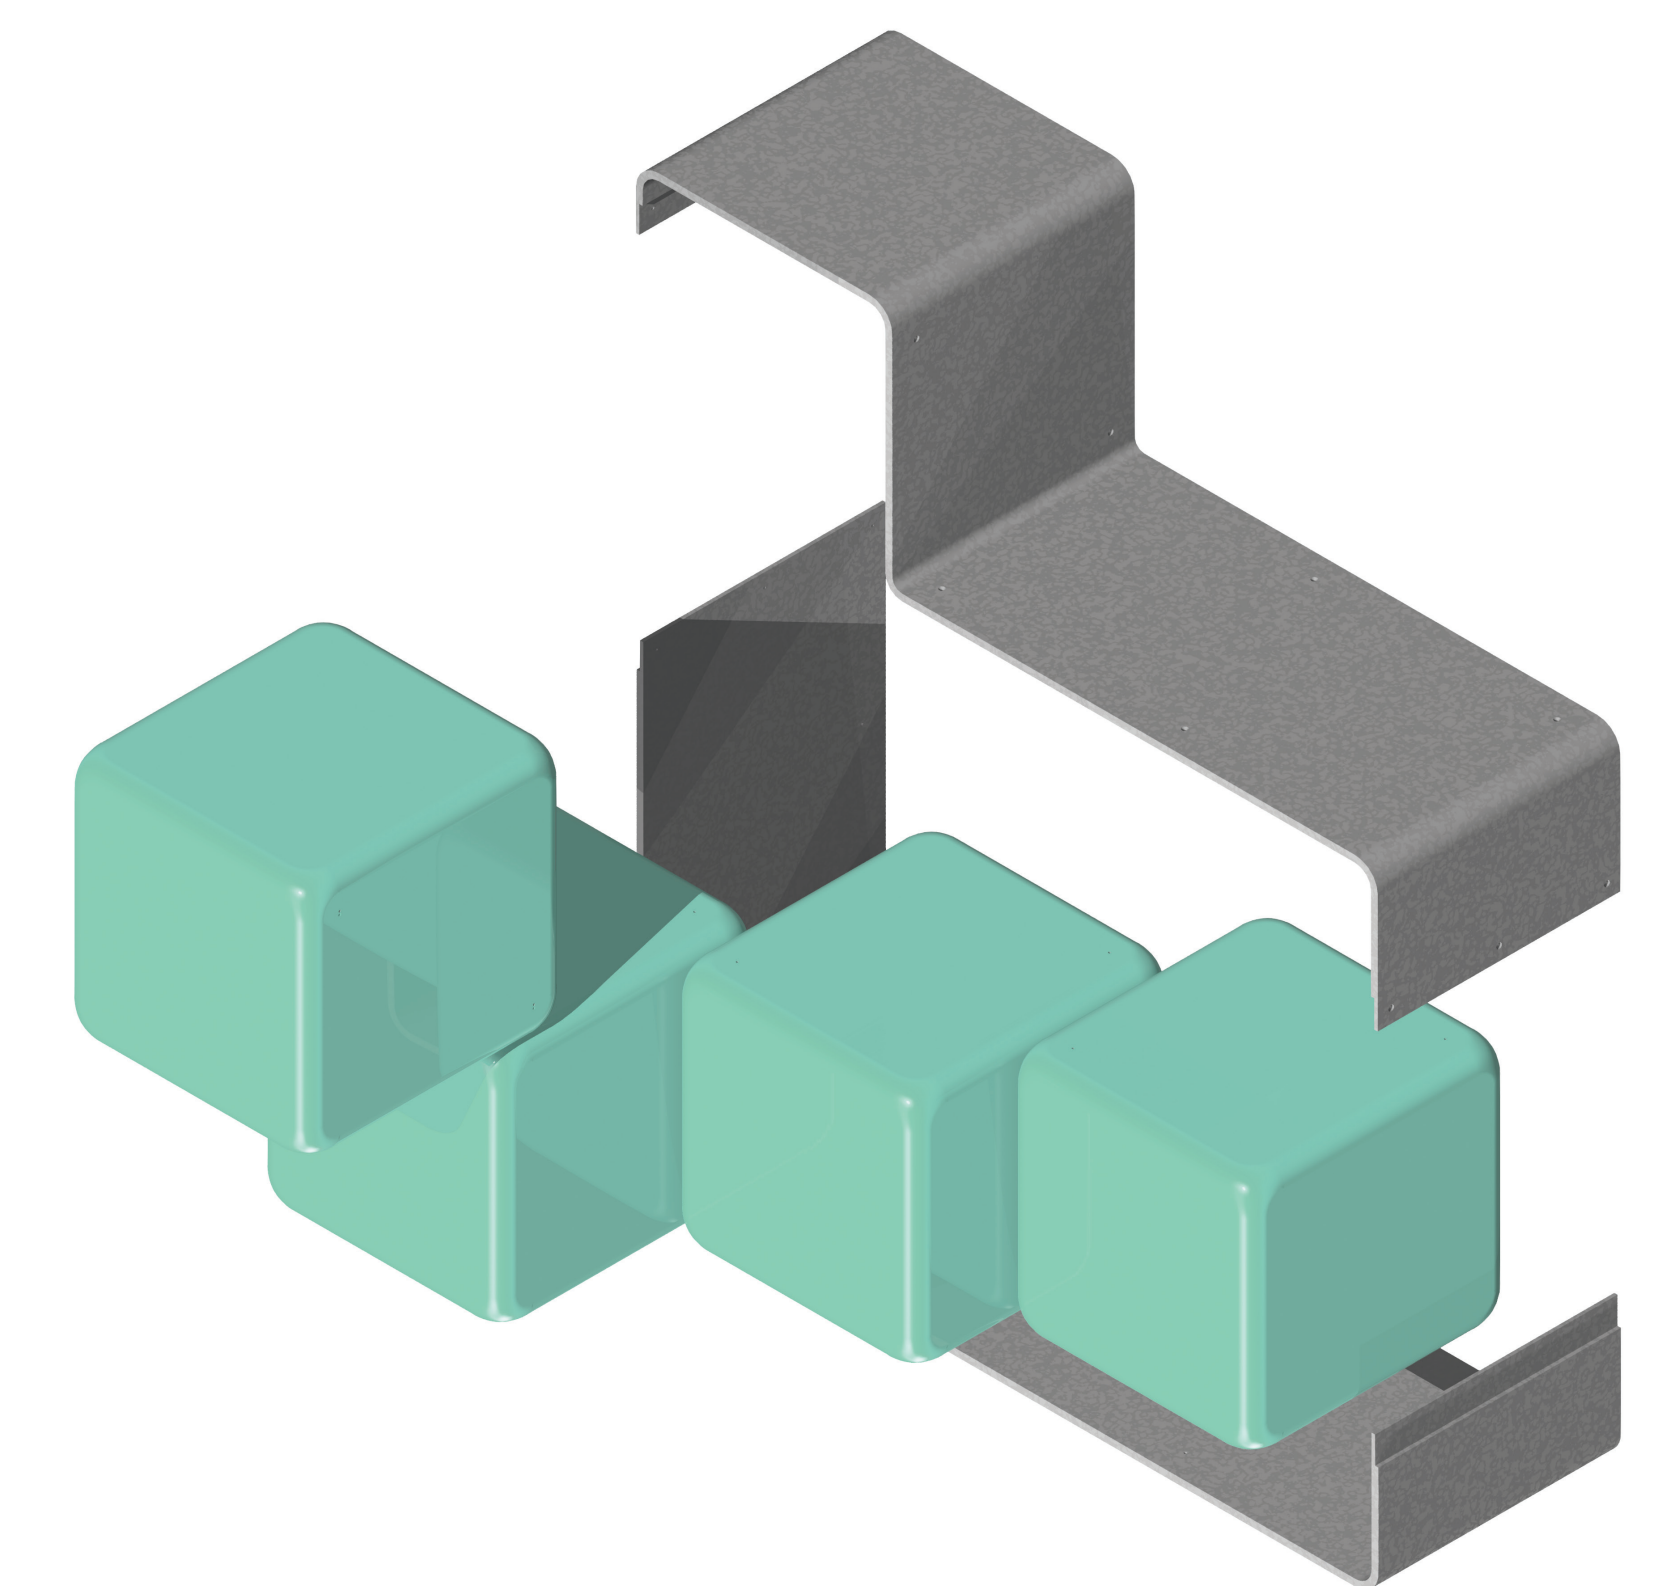

HOW IT'S USED

The park extends the pedestrian realm of the sidewalk allowing for the creation of a sense of community and increases the presence of non-commercial public space within the urban core of cities.
